

Forensic accounting & complex claims hurricane preparedness

April 2020

Help clients plan for and resolve complex claims resulting from large scale disasters

Willis Towers Watson has a team of highly qualified experts as part of its Risk & Analytics Practice. The practice includes many disciplines that provide solutions to issues that are critical to our clients.

Included in this group is Forensic Accounting & Complex Claims (FACC), a global practice consisting of certified public accountants, forensic accountants, certified fraud examiners, project managers, FEMA experts, and engineering and construction consultants, with colleagues residing in multiple offices around the world.

The FACC practice at Willis Towers Watson, working with our client advocates, assists clients in the preparation, quantification and resolution of large and complex claims, including property damage, business interruption, extra expense, contingent business interruption and third-party claims as well as pre-loss planning and the calculation of business interruption values. We add value for our clients by quantifying the loss amounts, gathering the necessary supporting documents, preparing and submitting the claim on the client's behalf, and managing the entire claim while maximizing the recovery within the parameters defined by the insurance policy.

The FACC team at Willis Towers Watson is among the industry's leaders in providing claim preparation and quantification services to large multi-national clients. The senior leaders of the FACC team have worked on some of the most challenging and complex insurance

claims resulting from some of the world's largest catastrophes and disasters, such as Superstorm Sandy and Hurricane Katrina, and the more recent Hurricanes Dorian, Harvey, Irma, Maria and Michael. FACC team members are at the forefront of their field and have been admitted as expert witnesses in local, federal and international courts and tribunals. In addition, FACC team members have been successful in quantifying and recovering billions of dollars on behalf of clients.

2020 Hurricane season forecast

This year's outlook will have an above-average probability for major hurricanes making landfall in 2020. The prediction is six-teen named storms (of those, eight will become hurricanes and four will become major hurricanes). The number of predicted storms is above normal, but the overall activity, which is based on the intensity of storms and their energy, is forecast to be slightly higher than average.

The tropical Atlantic is somewhat warmer than normal right now. Warmer-than-normal sea surface temperatures in the tropical Atlantic provide more fuel for tropical cyclone formation and intensification. They are also associated with a more unstable atmosphere as well as moister air, both of which favor organized thunderstorm activity that is necessary for hurricane development.

Disasters of this scale often result in complex insurance claims. The FACC team can help.

How FACC can help you and your clients recover from catastrophic events

The FACC team is available to assist with the calculations and preparation of claims resulting from business interruption, contingent business interruption, property damage, extra expense, contents and stock losses. FACC works in conjunction with the Willis Towers Watson claim advocates and other associates to move quickly through the settlement process and maximize claim recoveries based on the policy wording in place.

FACC helps clients across all industries and geographies recover from catastrophic events and can add value by:

- Simplifying the claim process so clients can focus on returning to normal day-to-day business activities
- Quantifying the loss amounts and gathering the necessary supporting documents
- Minimizing the overall disruption to business operations by obtaining cash advances in the early stages of a loss
- Preparing and submitting the claim on the client's behalf in a format that is familiar to insurers
- Working directly with the adjuster and the carrier's experts
- Participating in meetings to explain the methodology behind loss calculations and respond to requests for additional documentation
