Tracking recent asset price moves and our outlook

1. Our Outlook

A summary of our outlook is provided below:

- **First**, unpredictability and uncertainty are important factors in gauging the current outlook – it's important to understand what we don't know. We are not scientists or medical experts and, therefore, we are not trying to forecast the pathway for the number of COVID-19 cases. However, we are tracking the things we know are important on the medical side, e.g., the number and rate of change of cases and deaths, test count per million people, utilisation of hospital capacity, etc. And, of course, we are also tracking key short-term economic and financial indicators – travel reduction, claims for unemployment, spending on durable goods, recovery speeds in countries such as China, and market liquidity.

One of the main economic risks we are focusing on is whether fiscal policy and government support is continued at a sufficient scale. For example, whether the “Phase 4” fiscal stimulus package currently being discussed in Congress is agreed or not is critically important for the speed of the US recovery over the next four months. Jay Powell, the chair of the Federal Reserve, has emphasised that lower income households and small-and-medium sized businesses still need support. These economic sectors are inter-linked – these companies make up a high proportion of employment, which means any significant rise in liquidity and default risk would add materially to falls in incomes and spending.

- **Second**, based on these metrics and other recent economic datapoints and allowing for uncertainty, our outlook is as follows: China GDP reached its low point in February and has recovered sharply, led by its manufacturing and investment sectors –

we expect a broad economic recovery to continue. The US and Europe experienced a major recession in Q1 and April. GDP growth in these and other advanced economies started to pick-up notably in May and June. Although, the latest economic data points indicate the pace of recovery has slowed in the last three months.

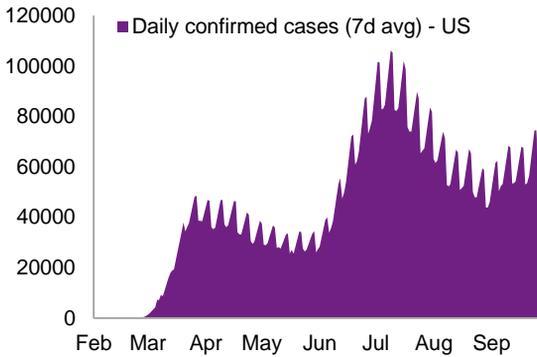

However, the shape of recovery in the world economy from Q4 2020 and beyond remains uncertain – we expect large divergences between countries given large differences in the number of virus cases, the size of fiscal and monetary policy responses, and other political (e.g., US election) and geopolitical factors (e.g., global trade relations).

- **Third**, from a five-year investment standpoint, given the acute changes in bond, credit, and equity pricing, we forecast that we have moved to a higher return and higher risk regime, from a low return/low-to-medium risk regime.
- **Fourth**, recent market moves have been severe but, in our view, provide a reminder about the regular actions investors can undertake. We will always face systemic risks, whether they are economic, societal (such as COVID-19) or environmental. Thinking carefully about the following actions will provide more resilient and, ultimately, more successful portfolios over time:
 1. The level of risk one can tolerate;
 2. Maximising the amount of diversity;
 3. Removing unrewarded risks;
 4. Carefully thinking through and managing liquidity needs.

COVID-19 case tracker

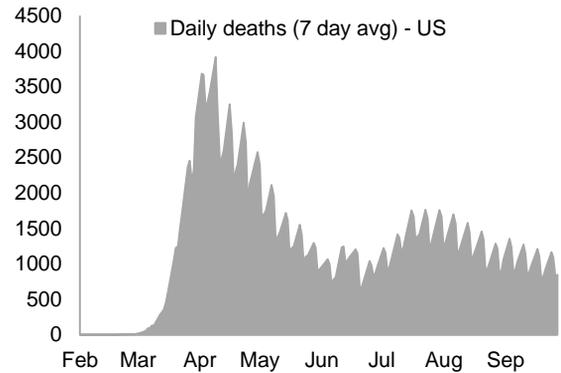

Daily cases: plateauing in US; rising rapidly in Europe; flat and low in China

Exhibit 1: The number of daily confirmed cases in the US has plateaued around 60,000 a day

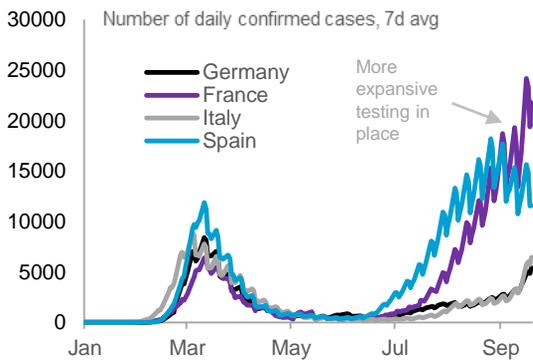

Source: Factset, Willis Towers Watson

Exhibit 2: Daily deaths have been stable due to improvements in treatment measures

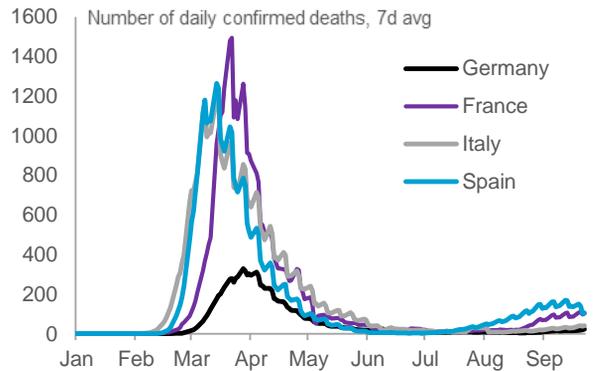

Source: Factset, Willis Towers Watson

Exhibit 3: Eurozone cases have crossed their previous peak, led by France and Spain

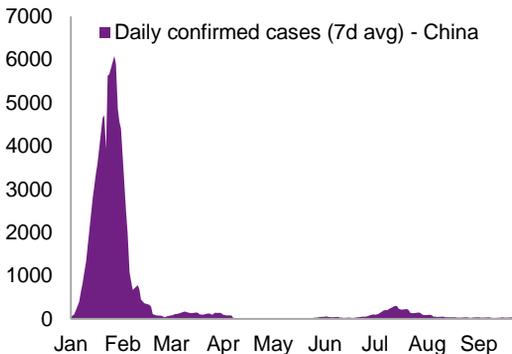

Source: Factset, Willis Towers Watson

Exhibit 4: Rising cases have not translated into high increases in mortality in Europe

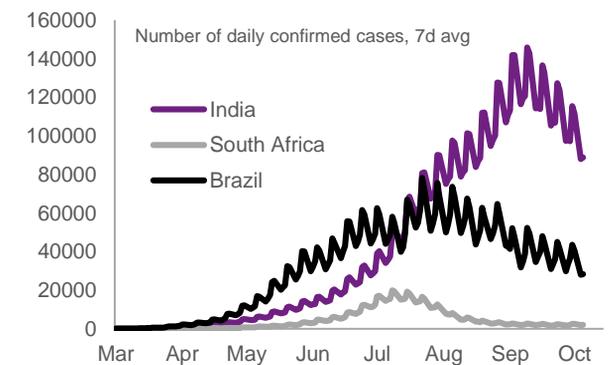

Source: Factset, Willis Towers Watson

Exhibit 5: The number of cases in China have remained low since March

Source: Factset, Willis Towers Watson

Exhibit 6: Large emerging markets: India / Brazil / South Africa are seeing declines in virus cases

Source: Factset, Willis Towers Watson

Economic conditions monitor

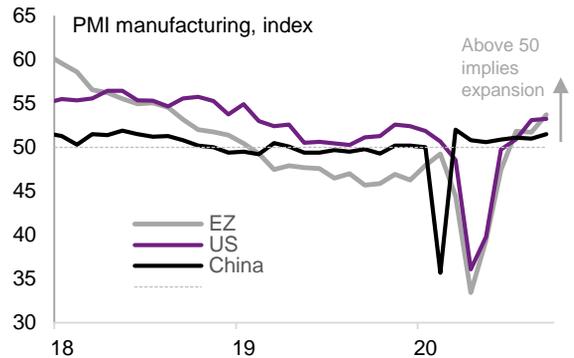

Tracking economic activity in the major economies

Exhibit 7: Sharp rebounds in all three major economies; China has had a very strong recovery

Comparing GDP levels to end-2019	Peak-to-trough fall in real GDP in Q1/Q2	Date of real GDP low-point	Estimates of current fall in real GDP at 30-September
China	-25%	February	-1%
United States	-15%	April	-4%
Germany	-15%	April	-6%
France	-20%	April	-6%
Italy	-25%	April	-9%
United Kingdom	-25%	April	-8%
Spain	-20%	April	-11%

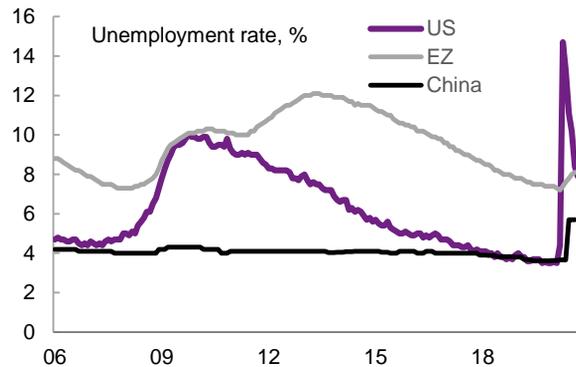

Source: Factset, Willis Towers Watson

Exhibit 8: Manufacturing PMIs have retraced previous falls but the recovery is slowing in US/EZ

Source: Factset, Willis Towers Watson

Exhibit 8: Unemployment will be slow to fall, weighing on wage growth in the medium term

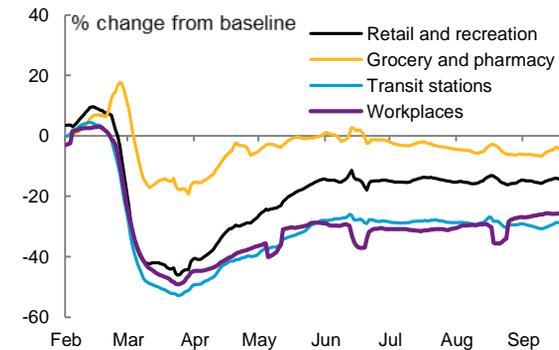

Source: Factset, Willis Towers Watson

Exhibit 8: Inflation in the US is recovering; inflation pressures are downward in the Eurozone

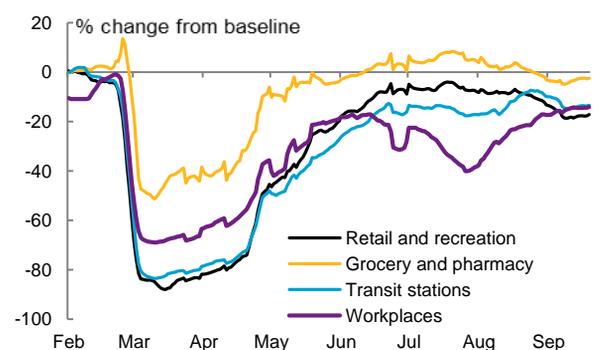

Source: Factset, Willis Towers Watson

Exhibit 9: US mobility has been relatively constant since June despite higher virus cases reported

Source: Google mobility report, Willis Towers Watson

Exhibit 10: France: Local lockdowns have been put in place due to rising cases constraining mobility

A summary of our assessment of government bond pricing and prospective medium-term outcomes

Sovereign bonds	Economic conditions priced-in	Our outlook for economic conditions	Asset return outlook	Comments
Developed short interest rates				<ul style="list-style-type: none"> Central banks have eased aggressively to provide liquidity and help manage a massive shock to incomes Advanced economy policy rates are at or around their perceived lower bounds and central banks are engaged in asset purchases Markets are pricing short interest rates to remain on hold for the next two to five years, depending on the market Low interest rates imply low returns on cash holdings
US				
Japan				
AAA-Eurozone				
Developed 10-year nominal bonds				<ul style="list-style-type: none"> Intermediate bond yields have fallen alongside short rates Looking ahead, yields are priced to remain close to historic lows over the next five years, only increasing slightly over the horizon Given how low yields are, bonds offer limited protection if economic conditions worsen Conversely, if policy is effective at mitigating the impact of the virus and spurring a quick recovery, yields could rise faster than is priced
US				
Japan				
AAA-Eurozone				

Key: Highly negative Negative Neutral Positive Highly positive

US short interest rates and bond yields are expected to remain low over the next 10-years

A summary of our assessment of corporate credit pricing and prospective medium-term outcomes

Credit	Economic conditions priced-in	Our outlook for economic conditions	Asset return outlook	Comments
Corporate credit				<ul style="list-style-type: none"> Investment grade markets are pricing in an allowance for an average level of credit losses We expect credit losses to be close to these levels, particularly in the nearer term with risks skewed to the upside
Investment grade				
High yield				<ul style="list-style-type: none"> At current levels, high quality credit assets are approaching levels at which they are likely to provide only modest returns above equivalent government bonds
US				
Europe				<ul style="list-style-type: none"> We retain a somewhat cautious outlook for developed market vanilla speculative-grade credit given shorter-term risks. Current pricing implies an average level of defaults relative to historic average pricing. As such, pricing has moved closer to fairly discounting a more optimistic outlook for corporate credit.
Loans				
US				
Europe				<ul style="list-style-type: none"> Niche and securitized market pricing appears to be discounting a somewhat more pessimistic outlook (in aggregate) relative to vanilla corporate credit markets

Key: Highly negative Negative Neutral Positive Highly positive

Investment grade spreads increased modestly over the past month but remain elevated and broadly at the upper end of their interquartile ranges

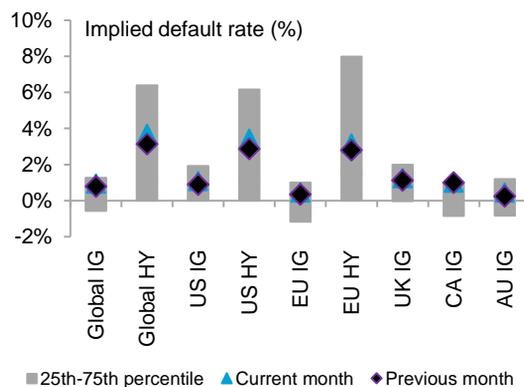

Investment grade corporate option-adjusted spreads, bps

Source: FactSet, Willis Towers Watson).

Market implied default rates remain close to their long term averages

Estimated implied default rate based on current pricing

UK	-1.6%	-1.3%	-0.4%	-22.5%	-19.7%	-68.0%	140.9%	-4.4%	-22.3%	18.0%
US	-3.8%	-0.4%	-3.5%	14.9%	17.1%	-18.8%	41.6%	12.8%	1.7%	8.7%
China	-4.2%	-3.2%	-1.8%	29.7%	32.2%	-6.5%	32.8%	7.8%	4.3%	1.8%
MSCI World	-3.0%	0.0%	-3.7%	6.8%	9.1%	-26.4%	47.5%	8.4%	-3.1%	9.0%
MSCI AC World	-3.0%	-0.1%	-3.5%	7.2%	9.6%	-25.7%	46.2%	8.1%	-3.3%	8.6%
MSCI EM	-3.3%	-1.2%	-2.3%	10.0%	12.8%	-24.1%	42.2%	5.2%	-6.4%	6.7%

A summary of our assessment of equity pricing and prospective medium-term outcomes

Global equities	Economic conditions priced-in	Our outlook for economic conditions	Asset return outlook
Developed	Neutral	Neutral	Neutral
Emerging	Highly negative	Highly negative	Neutral

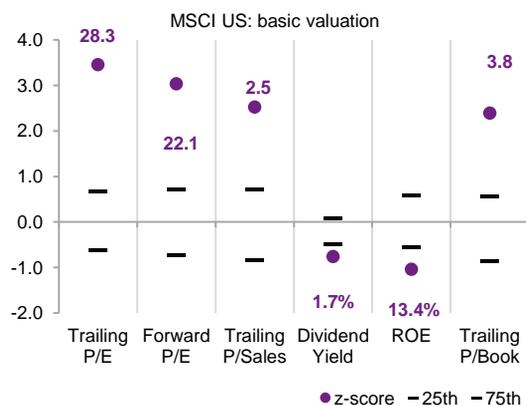

Comments

- Prices fell in most markets in September; valuations based on 12-month trailing and forward profits remain high
- Q2 showed a material earnings trough in developed and emerging markets in 2020; in line with our view
- We believe a further moderate price correction is more likely than not over the next 6 months
- US valuations are higher relative to broader developed markets, which we see as consistent with higher US fiscal and monetary stimulus
- EM valuations are lower vs. developed markets, which we see as consistent with higher virus and economic related risks, e.g., income falls in EM-ex China have been large and their level of economic stimulus lower
- Current equity prices are consistent with good expected 5-year returns in a scenario where earnings begin to recover in Q3/Q4 2020. This is contingent on effective policy, with material drawdown risk and uncertainty remaining

Key: Highly negative Negative Neutral Positive Highly positive

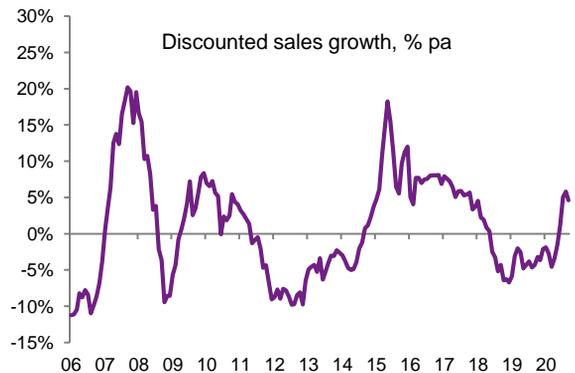

Developed market valuations are high as investors expect medium term earnings potential to remain relatively unimpacted

Valuation metrics for the MSCI World equity index

Market pricing implies low-to-average earnings growth prospects for Chinese equities over 5 years. This overstates downside risks in our view

Medium-term growth priced-in by current equity price, % pa
