## Pension index rebounded in October

The Willis Towers Watson Pension Index started the third quarter on a positive note, rebounding to levels last seen in the first half of 2021. This increase was primarily a result of strong investment returns. The index level of 88.1 reflects an increase of 2.1% for October.

### Willis Towers Watson Pension Index

#### About this report

*Pension Finance Watch* is designed to support our clients in the ongoing financial management of their U.S. retirement plans. The report tracks the value of the Willis Towers Watson Pension Index in a series that was initiated in 1990.

The index reflects the asset/liability performance of a hypothetical benchmark pension plan, and it provides an indicator of capital market effects on pension plan financing. Individual plan results will vary based on such factors as portfolio composition, investment management strategy, liability characteristics and contribution policy.

If you have questions or comments about this report, please contact Christopher Kludy, FSA, MAAA, EA, CFA at [chris.kludy@willistowerswatson.com](mailto:chris.kludy@willistowerswatson.com)

## Investment returns

The equity portion of the benchmark portfolio returned 5.9% in October, with the domestic equity asset classes having the strongest performance. The fixed income investments of the tracked benchmark portfolio returned -0.03%. Zero returns on the cash and aggregate asset classes almost completely offset the large gains experienced by long Corporate and Treasury bonds.

Asset Class Returns			
	October 2021	YTD	Last 12 Months
<b>Stock Returns</b>			
S&P 500 (Large Cap)	7.0%	24.1%	42.9%
Russell 2500 (U.S. Small/Mid-Cap)	4.9%	19.4%	49.4%
EAFE (International)	2.5%	11.0%	34.2%
<b>Fixed Income Returns</b>			
3-Month T-Bills	0.0%	0.0%	0.1%
Long Treasury Bonds	1.9%	-5.8%	-5.8%
Bloomberg Barclays U.S. Aggregate	0.0%	-1.6%	-0.5%
Long Corporate Bonds (AAA/AA)	1.5%	-2.3%	2.3%

## Interest rates

Yields on long high-quality corporate bond indices decreased an average of 10 basis points. These were met with mixed results on long Treasury rates. Yields on 10-year Treasury bonds increased by 3 basis points while the yields on 30-year Treasury bonds decreased by 15 basis points.

Bond Yields			
	Oct. 2021	Dec 2020	Oct. 2020
<b>U.S. Treasuries</b>			
30-Year	1.93	1.65	1.65
10-Year	1.55	0.93	0.88
3-Month	0.05	0.09	0.09
<b>Corporate Bonds</b>			
ML AA-AAA 10+	2.75	2.43	2.68
FTSE HG Credit	2.78	2.45	2.67
Moody's Aa	2.75	2.42	2.60
BB Aggregate	1.67	1.14	1.25

## Effect on pension index

The Willis Towers Watson Pension Index tracks the performance of a hypothetical pension plan invested in a 60% equity/40% fixed income portfolio. This portfolio recorded a 3.5% return for October. Several alternative portfolios are also monitored. Portfolios with 20% and 60% fixed income allocations produced 4.7% and 2.3% returns, respectively. A variation of the 60% fixed income portfolio that incorporates longer-duration fixed income investments generated a 3.3% monthly return.

Discount rates used by U.S. plan sponsors to measure pension obligations are typically measured with reference to yields on high quality corporate bonds. The index relies on Willis Towers Watson's proprietary RATE:Link model for this purpose.

Pension obligations move in the opposite direction of the interest rates used for their valuation. The liability implicit in the index increased by 1.4% from the discount rate change and the accumulation of interest.

These factors contributed to an overall increase of 2.1% in the Willis Towers Watson Pension Index, which closes the month at 88.1.

<b>Pension Index Results</b>			
	<i>October 2021</i>	<i>YTD</i>	<i>Last 12 Months</i>
<b>Benchmark Portfolio Returns</b>			
20% Fixed Income	4.7%	16.3%	33.0%
40% Fixed Income (benchmark)	3.5%	11.7%	23.9%
60% Fixed Income	2.3%	7.2%	15.3%
60% Fixed Income (long duration version)	3.3%	5.8%	14.5%
<b>Benchmark Plan Liability Results</b>			
Discount Rate (at valuation date)*	2.98	2.78	3.12
Liability Growth Factor	1.4%	-0.5%	5.2%
<b>Pension Index*</b>			
Percentage change	+2.1%	+12.2%	+17.8%

\*Discount rates and pension index values in the three columns are as of 10/31/2021, 12/31/2020 and 10/31/2020, respectively.

## Definition of terms

### Asset Class Returns

- Total return incorporates the combined effect of price changes and interest/dividend income; this may differ from index results which are based only on price changes.
- The Russell 2500 Index tracks companies ranked 501 to 3000 ordered by market value of equity; these are considered small and mid-capitalization stocks.
- EAFE refers to the Morgan Stanley Capital International Europe, Australasia, Far East Index of equity securities; total return is reported in U.S. dollars, which includes the effect of currency changes.
- 3-Month T-Bill returns are based on the FTSE 3-Month Treasury Bill Index.
- Long Treasury Bond returns are based on the Bloomberg Barclays Long Treasury Bond Index.
- Long Corporate Bond returns are based on the FTSE High Grade Credit Index (as described above).

### Bond Yields

- Treasury yields are constant maturity yields reported by the Federal Reserve.
- ML 10+ AA-AAA 10+ Index includes issues with 10+ years to maturity and AA or AAA ratings from the Merrill Lynch U.S. Corporate Master Index.
- FTSE High Grade Credit Index includes issues with 10+ years to maturity and a minimum rating of AA-/Aa3.
- Moody's Aa Corporate Bond Index is a component of Moody's Long Term Corporate Bond Indexes; included bonds have maturities of 20+ years.
- Bloomberg Barclays U.S. Aggregate Bond Index covers the broad range of investment grade bonds, including government and corporate securities (minimum grade Baa) and mortgages.
- Bond yields are stated as yields to maturity, on a bond-equivalent basis (reflecting semi-annual coupons).

### Benchmark Portfolio Returns

- The benchmark portfolio reflects a diversified asset allocation of 60% equity (40% large cap, 10% small/mid-cap, 10% international) and 40% fixed income (35% BB Aggregate bonds, 5% T-bills). This generally aligns with the average portfolio for the 300 large companies included in Willis Towers Watson's benchmarking database.
- Alternative portfolios with 20% and 60% fixed income allocations are constructed with similar asset class ratios within their equity and fixed income segments.
- The 60% fixed income-long duration portfolio includes a similarly constructed equity segment along with a fixed income segment consisting of 27.5% long corporate bonds, 27.5% long Treasury bonds and 5% T-bills.

### Benchmark Discount Rate

- The discount rate is determined for our benchmark plan each month using a yield curve developed based on high-quality corporate bonds (10th-90th percentiles). This calculation uses Willis Towers Watson's RATE:Link methodology to develop an appropriate discount rate based on the benchmark plan's projected cash flows. Higher or lower discount rates might be appropriate for other plans.

### Liability Growth Factor

- The benchmark plan is based on a traditional final-pay based formula and covers a relatively mature population. Roughly one-half of the plan's obligations are related to inactive participants. The liability growth factor measures the change in the plan's projected benefit obligation due to the accumulation of interest and changes in financial assumptions.\*

### Willis Towers Watson Pension Index

- The index is designed to capture the impact of capital market results, without influence from the costs of ongoing accruals or cash inflows/outflows related to contributions and benefit payments.
- The index reflects the PBO funded ratio (market value of assets/projected benefit obligation) for a benchmark pension plan. The asset value changes from month to month based on the investment performance of the 40% fixed income portfolio. Liability values are adjusted to reflect changes in financial assumptions.

---

\* Discount rate and compensation increase assumptions are adjusted to reflect changes in market interest rates. The net sensitivity of the benchmark plan's benefit obligation to a percentage point change in interest rates is roughly 14%. These dynamics vary considerably among plans, depending on characteristics such as the benefit formula and on the demographic profile of the covered population.

---
