

# DataValidator

Efficient validation and transformation of data

# DataValidator

*Insurers are under ever-increasing pressure to streamline the production of financial modelling and risk analytics, while maintaining strict governance controls to satisfy emerging regulatory requirements.*

The integrity of your financial modelling and analytics will directly reflect the quality and completeness of the data feeding into them. The overall efficiency of your end-to-end processes will depend on your ability to guarantee data quality early in the process to avoid unnecessary rework and manual adjustments.

Willis Towers Watson DataValidator is a flexible and user-friendly software solution that enables your company to validate, cleanse and transform your data, efficiently preparing it for use in financial modelling and reporting processes. The software helps you to quickly implement validation, cleansing and transformation rules, and captures all relevant audit information to produce full audit-trails necessary for strict audit control and governance.

## Assess data quality

DataValidator lets you predefine custom data check rules, which it subsequently uses to assess the accuracy and completeness of your data (*Figure 1*).

The software also contains powerful functionality to validate the reasonableness of movements in the data across time periods and alert you to potential issues for review, such as in the completeness or consistency of the data (*Figure 2*). These data quality assessments provide for efficiency, integrity and reliability of your downstream processes.

## Transform data

DataValidator provides a custom formula editor that enables you to perform complex data transformations (*Figure 3*). This flexibility makes it possible to get the data just how you need it for use within other downstream systems and processes.

### DataValidator and Solutions for Life

DataValidator is part of our Solutions for Life portfolio of integrated software, technology and consulting services – a holistic solution to managing the end-to-end risk reporting process. For more information on Solutions for Life, turn to page 7 of this brochure or visit: [solutionsforlife.willistowerswatson.com](https://solutionsforlife.willistowerswatson.com).

Figure 2. The software can validate the reasonableness of movements in data across time

## Audit readiness

The software automatically produces reports to capture results of data quality checks and a full audit history of data-cleansing actions and transformations to provide the necessary audit trail required for regulatory compliance and best practice governance.

## Process workflow

DataValidator supports batch processing, which enables the processing of multiple data extracts simultaneously at the click of a button (*Figure 4*) and live job-monitoring through a clean interface design.

The software can also be run within Willis Towers Watson's integration, automation and governance platform, Unify. This allows you to fully integrate your data validation, cleansing and transformation activities into your end-to-end processes to generate more frequent and quicker reporting and analytical calculation processes with greater efficiency, consistency and reliability.

## Ease of use

DataValidator provides pre-built functions to help you get a quick start in setting up the software to meet your data validation requirements.

The software has a clean and intuitive user interface and functionality to help users learn their way around the software quickly and to use it efficiently.

The flexibility of the DataValidator makes it a useful tool for everyday use within the business and can provide benefits far beyond the regular reporting cycle.

## The Willis Towers Watson difference

DataValidator is developed, maintained and supported by Willis Towers Watson, a leading global professional services company with expertise in risk, financial management, software and information technology. With our combination of software and actuarial expertise, we are uniquely qualified to deliver a fully integrated business technology solution that will satisfy your company's needs for best practice risk and financial modelling, reporting and management.

Willis Towers Watson consultants are active in actuarial societies around the world and have worked extensively with leading insurers to provide pricing, financial reporting and modelling advisory services.

Our Technology Consulting Services staff can guide you in determining a proper configuration for your company's financial modelling and reporting compute environment. Let our experts work with your IT department to make deployment a smooth, easy process.
