

Supports your aviation insurance underwriting, assessing exposure and pricing risk

The Aviation Rating Application models exposure in multiple ways, providing a bespoke view and reliable price for each risk.

Each model is tailored for you, to be as flexible and intricate as your underwriting decisions may be.

The underlying complexity is encased in an intuitive user interface that steps you through the process with ease. The fast and efficient calculation engine will not interrupt your workflow, except to let you know when it's finished, by email.

A **bespoke** solution offering true value to your decision making process.

A fully **flexible** framework which you can design, run, adjust, save and store your own models. Models can be custom built from scratch, or you can use and fine-tune the WTW template models. Adaptable underlying datasets allowing you to manage the data quality and vary the data sourcing.

A secure, web-based environment accessible world-wide 24/7

Models and data are easy to store and retrieve. Your models are kept in the Warehouse facility in an area secure to you. For additional protection, optional role-based access is available to distinguish between actuary, model builders, model users.

Fast and efficient calculation engine

During calculations, your workflow is not interrupted. Just set up the notification option to e-mail you when the calculations are complete. Then view the results onscreen, or export them.

Real-time world airline fleet at your disposal

The application utilises live, third party data feeds. You can take a snapshot of the world fleet on any day to use in your model. Data can be adjusted by you, and you can add your own user-defined data to further enhance your results. User-defined datasets are kept in the Warehouse facility in an area secure to you.

Consistent and comparable rating year-on-year

Different models can approach the same question in different ways. With **multi modelling options** you can see the results of different modelling choices.

Options consolidate, weight and blend your model results to give a risk premium that is relevant to your business.

Incorporate loss history from the eXPRESS Major Loss Database, consider the soft factors based on underwriter experience and then view calculated premium for the selected Insured(s).

The intuitive user interface guides you through the process

eXPRESS Online is a growing platform, continuously fed with more tools and functionality. Ask your account executive for further details.
